

About Me

As a senior **Electrical and Computer Engineering student**, I have developed a strong foundation in programming languages such as C, Java, Python, PIC assembly and MIPS assembly, and Verilog HDL. My technical skills combined with my passion for problem-solving have enabled me to excel in my coursework and projects.

In addition to my technical abilities, I have also developed strong leadership skills through my involvement in multiple student clubs and leading different projects. This has sparked my interest in project management. I am constantly seeking new challenges and opportunities to further develop my skills and knowledge in this area.
